## **Psychology Department: Curriculum Overview 2023-24**

## **Curriculum Intent:**

In Social Sciences, our aims are for all students

- To develop an understanding of the complexities of the society that we live in with a particular focus on understanding why and how we act and the consequences of this.
- To show tolerance and respect for others.
- To provide qualifications and skills that will prepare students for life after Fullbrook and equip them with knowledge that they will use for the rest of their life.

•

## In Psychology, our aims are for all students

- To be able to identify why humans behave in certain ways
- To be able to explain the role of nature and nurture
- To use research-based evidence to support their understanding
- To develop the skills required to plan, conduct and analyse a psychological study
- To develop analysis and critical evaluation skills

Content	Neuropsychology  Structure of the brain Structure and function of the nervous system  Neuron structure and function and synaptic transmission  Research methods Planning research: hypothesis Planning research: variables and experimental designs Planning research: populations and sampling Planning research: ethics	Research methods  Doing research: experiments  Doing research: interviews and questionnaires  Doing research: Observations and case studies  Doing research: correlations  Analysing research: types of data Analysing research: descriptive statistics Analysing research: presenting research: presenting research: reliability, validity and sources of bias  Development Stages of development and brain development	Development  Piaget's theory of cognitive development  Piaget's study into conservation of number  Learning theories of development  Blackwell's study into fixed and growth mindset  Application of learning theories to education	Criminal psychology  Defining crimes and measuring crime  SLT Cooper and Mackie Key study Eysenck's criminal personality Heaven key study	Criminal psychology	Psychological problems  Biological theory of schizophrenia  Daniel's study into effect of amphetamines  Treating schizophrenua  Characteristics of depression  ABC model  Social rank theory  Tandoc's study into facebook use  Neuropsychology as a treatment	Students will have a good understanding of the structure and fucnctions of the brain and CNS and be able to link this to key theories and studies  Students will be confident in applying research methods skills  Students will be able to evaluate psychological theory and studies
Prior Knowledge Required		IQ tests  Planning research, structure of the brain and neurons	Research methodsSI	Research methods, structure of brain and nervous system	Research methods, structure of brain and nervous system	Research methods, structure of brain and nervous system	write balanced psychological arguments
Feedback Points	Neuropsychology- quiz  Research methods mid topic assessment – individual feedback	Research methods- end of topic assessment – class feedback	Developmental psychology end of topic test	13 marker introduction  Criminal psych mid topic test - individual feedback	Criminal psychology end of topic test – class feedback	Psychological problems end of topic test- class feedback	
Key Questions	<ul> <li>How is the brain structured and what roles does various parts have?</li> <li>What does the CNS do?</li> <li>How do neurons and synapses work? How do they interact?</li> <li>What are the different types of hypotheses, when do these work?</li> </ul>	<ul> <li>How and why would a researcher use different types of experiemnts?</li> <li>How are interviews and questionnaires used in psychology?</li> <li>What are the different forms of observations and</li> </ul>	<ul> <li>What happens during Piaget's stages of development?</li> <li>What did Piaget conclude in his study on conservation?</li> <li>What is a growth or fixed mindset? What did Willingham state about the importance of meaning?</li> </ul>	<ul> <li>How are crimes defined and measured?</li> <li>What does the Social learning theory state about behaviour?</li> <li>How does Cooper and Mackie's study support the SLT?</li> <li>What did Eysenck define as a criminal</li> </ul>	<ul> <li>Why are different methods used to deal with crime?</li> <li>How is ideal mental health defined?</li> <li>What do current stats show about mental health?</li> <li>How have legal changes and campaigns reduced stigma around mental illness?</li> </ul>	<ul> <li>How does the biological theory attempt to explain schizophrenia?</li> <li>What impact did amphetamine usage have on schizophrenia?</li> <li>What methods are used to treat schizophrenia?</li> </ul>	

	<ul> <li>What variables does a researcher need to control?</li> <li>What different sampling methods can be used?</li> <li>What ethical considerations have to be made in psychological research?</li> </ul>	what effects do these have?  When might a psychologist use correlations?  What are the different types of data encountered in psychology  How are descriptive statistics used to analyse results?  What are the different methods used to present psychological findings?  Why is reliability, validity and bias so important?  What are the different stages of brain development in a lifetime?  How are IQ tests used to measure	<ul> <li>What did Blackwell conclude about learners with a fixed or growth mindset?</li> <li>How are learning theories applied to teaching in classrooms</li> </ul>	personality? How is this connected to the brain and CNS?  • What did the Heaven study conclude about criminality?	<ul> <li>What effects does mental health on the individual and wider society?</li> <li>What are the clinical characteristics of schizophrenia?</li> <li>How is the social drift theory used to explain the experiences of schizophrenics?</li> </ul>	<ul> <li>What are the key characteristics of depression?</li> <li>How does the ABC model explain depression?</li> <li>How does the social rank theory explain depression?</li> <li>What did Tandoc conclude about the impact of facebook on mental helath?</li> <li>How can neuropsychology be used to treat psychological problems?</li> </ul>

Prior Knowledge Required	None required for approaches.  Research Methods- some of the key terms such as independent/dependent variable have been seen in Science GCSE and Psychology GCSE.	Previous knowledge from either Biology GCSE or Psychology GCSE neuropsychology  Research methods- from last half term.	Previous topic Biopsychology (areas such as synaptic transmission) applies to some of the content such as drug therapies  RM- content on validity and reliability covered initially in term 1- this is an extension.  All RM applies.	Design a study linked to previous RM topics.	RM topics covered previously such as observational design applies to SSP.  Maths skills from maths GCSE.	RM topics covered previously apply to all content.	

Feedback Points  Approaches end of topic assessment- Individual feedback  & Research Methods questions within end of topic  Key Questions  Approaches:  What is the difference between classical and operant conditioning?  How are behaviours imitated?  How is the brain compared to a computer model?  How do biological structures relate to behaviour?  How does the psychodynamic approach explain human behaviour?	Biopsychology – end of topic assessment- Class feedback  & Research Methods questions within end of topic  Biopsychology:  • What are the divisions of the nervous system?  • How is information transmitted across the synapse?  • What system supplements the nervous system?  • How does the body respond to stress?  • How does strucutre link to function?  • What is hemispheric lateralisation?	Abnormality- end of topic assessment- Individual feedback  & Research Methods questions within end of topic  Psychopathology:  • What are the definitions of abnormality?  • What are the behavioural, emotional and cognitive characteristics of phobias, depression and OCD?  • How can we explain and treat phobia's using the behavioural approach?  • How can we explain	Memory – end of topic assessment- class feedback  & Research Methods questions within end of topic  Memory:  • What are the differences between short and long term memory?  • What are the components of the multi-store model?  • What are the components of the working memory model?  • What are the different types of long term memory?  • How can we explain	Attachment- end of topic assessment- Individual feedback  & Research Methods questions within end of topic  Attachment:  • How do infants interact with their caregivers?  • How does attachment develop?  • What do animals tell us about attachment?  • How does the learning theory explain attachment?  • How does Bowlby's theory explain attachment?  • How can the SSP be used to measure attachment?  • What are the different attachment types?  • How does attachment vary	Social Influence- end of topic assessment- class feedback  & Research Methods questions within end of topic  Social Influence:  • What are the different types and explanations for conformity?  • What variables affect conformity?  • How do we conform to social roles?  • What situational variables affect obedience?  • What is meant by the term 'agentic state'?  • What is the authoritarian
How does the humanistic approach explain human behaviour?     How can the approaches be compared?  Research methods:     What is the importance of scientific research in Psychology?     What are the different types of hypotheses?     What are the types of experiment and design?     What ethical issues do we come across in psychology and how do we deal with them?     How do we select participants for an experiment?     How do we collect data from participants?	<ul> <li>How does the brain recover after trauma?</li> <li>How can we study the brain?</li> <li>What is a circadian rhythm?</li> <li>What is an ultradian and infradian rhythm?</li> <li>What is an endogenous pacemaker and exogenous zeitgeber?</li> </ul>	and treat depression?  • How can we explain and treat OCD using the biological approach?  Research methods:  • What are the different types of validity and reliability?  • How do we write an	forgetting?  How does misleading information effect eyewitness testimony?  How does anxiety effect eyewitness testimony?  How can we improve eyewitness testimony?  Research methods:  How do we design a study?	between cultures?  What is Bowlby's theory of maternal deprivation?  What does the ERA study tell us about the effects of institutionalisation?  What are the consequences of early attachment?  Research methods:  What is the purpose of peer review?  How is Psychology linked to the economy?  How can we use case studies and thematic analysis in Psychology?  What is content analysis?  How can we use maths skills in Psychology?	personality?  How can people resit social influence?  How do minority groups influence the majority?  What social influence processes are involved in social change?

Direct Vocab Instruction	Conditioning Reinforcement Imitation Inferences Genotype Phenotypes Hierarchy Congruence	Neuron Synaptic transmission Endogenous pacemaker Exogenous zeitgeber Ultradian Infradian Circadian Synaptic transmission Hemispheric lateralisation Corpus callosum	Abnormality Deviation Infrequency Deviation Desensitisation	Coding Capacity Duration Store Proactive Retroactive Accuracy Interference	Reciprocity Synchrony Critical period Deprivation Institutionalisation Caregiver Continuity Variations	Internalisation Identification Compliance Conformity Unanimity Legitimacy Dispositional Situational Consistency Commitment
